Mission to Mars

Who are we?

Our team name is PARENTAL CONTROLS NEEDED. We are a group of four people

Our names are

Esran: The Hardware master, person wiring the arduino and the secondary coder.

Adam: The master caretaker and ultimate backseat driver of code.

Will: Main code master, Time keeper and typer.

Jordan: The secondary backseat driver of code and the prime tester.

What are our team values?

Respect each other.

It's pronounced Sc Oh Ne

Be kind towards our team and others

Don't lick the processor (someone did that last year)

The Demo

Next we will demonstrate the code we what we have been doing in the project. We will show you how we have used sensors, motors and timers to maneuver the rovers in the hopes of replicating a machine that could survive on mars.

What went well - we worked cohesively as a team and completed a sufficient number of tasks.

What to improve - minimise rover malfunctions and proofread the code.

Next time - be more gentle with the rovers and switch who is coding more frequently so we know what is being typed and all understand it.

Thanks
